HOW TO INCREASE PROFITS AS EASY AS 1, 2, 3. (Really.)

INCREASE PROFITS BY GETTING THE MOST OUT OF YOUR ASSETS

with TeraHop Networks—the rugged plug-and-play asset monitoring system that works wherever you do.

TeraHop is the powerful, out-of-the-box ready, asset monitoring system that delivers timely and accurate data even in remote locations and severe conditions. Locate, track and monitor valuable assets—automatically, wirelessly & hands-free. It's as easy as 1, 2, 3...

1

ELIMINATE MISTAKES

Collecting and inputting data manually is expensive and error-prone — making decisions based on outdated and unreliable data can keep you from gaining a competitive edge.

Stop time-consuming and error-prone manual data collection and input and replace it with accurate, timely and hands-free, automated wireless collection. Change the garbage in, garbage out paradigm and make decisions with confidence.

ASSET MANAGEMENT WITH A REAL DIFFERENCE

- 1 NO cell/satellite subscription fees.
- 2 NO infrastructure needed.
- 3 Portable and rugged—It works wherever you do.
- 4 Automatic, wireless & hands free data collection.
- 5 Range of up to 3,000 feet.
- 6 Battery or line powered.
- 7 Easy to use, easy to set up. Really.

2

MINIMIZE WASTE

Stop wasting time and productivity manually tracking and searching job sites/yards for vehicles and equipment. Know where your equipment, personnel, inventory, and vehicles are at all times.

Save fuel and maintenance costs by monitoring and reducing costly idling time on your equipment and vehicles.

Stop cost overruns before they happen by monitoring your personnel's time and attendance and tracking their location automatically.

"We chose TeraHop Networks because it delivers all the features we need and works in any environment we do. I estimate a savings of more than \$60,000 a year compared to other solutions. They've solved an important problem for us."

Bill Grady
CEO, KLB Construction

3

DECREASE ASSET COST OF OWNERSHIP

Perform maintenance on time, instead of too often — which wastes money and increases cost of ownership — or too late, which can result in lost productivity and unscheduled repair.

Optimize equipment utilization by monitoring presence and run time and reallocate equipment that's being underutilized.
